TECHNICAL EXPLANATION OF THE CHANGE

Issue	Improper siphoning problems in w/m s that is implemented with the double water inlet valves. (complaints of too early softener intake, no siphoning, there is softener left in the drawer the wash is not soft enough,etc)
--------------	--

Explanation

Double way valves have been used in w/m s using detergent box with intersecting water jets for softener/conditioner intake.

If there is a complaint about an improper siphoning or a no softener/ conditioner intake and it is not because of infrastructure or softener quality,

- For the production dates between January -February .05; both the detergent box assembly and the water inlet valve must be replaced (If the water pressure is above 1 bar, there is not any problem with the valves. Below 1 bar of pressure, the risk of "not siphoning properly" might be seen).

- For the production dates between March - June .05; only the water inlet valve must be replaced.

Low pressure in consumers' water mains network could sometimes be the reason in such problems.

- If the w/m takes the softener/conditioner earlier than ''softener intake phase'', only the detergent box assembly must be replaced.

INFORMATION ABOUT THE PART CHANGES

Ref	New part(s)			Old Part(s)			Code
	Part name	Stock number	Rev	Part name	Stock number	Rev	
737	WATER INLET VALVE	29 0125 01 00		WATER INLET VALVE	29 0125 01 00		

CODE EXPLANATION :

A-Old stocks can be used; Old & new parts are fully interchangeable

B-Old stocks can be used; Old parts are interchangeable with old productions & new parts are interchangeable with productions

C-Old stocks can not be used. New parts are interchangeable with old & new productions

D-Old stocks can not be used. New parts are interchangeable with new productions
