## How to set the Region Code / Local Set for new Samsung Mainboards

Version EN.1 (19th Dec. 2017)

Attention! The setting may vary from device to device.

## Symptom:

Your country is not available after Mainboard replacement.

In Service Mode "Local Set" only show "EU" and cannot be changed.

To change Region Code / Local Set please use Samsung service remote (ASWO code #H714616 (or older service remote #D376997)):

- 1. Turn on device and wait a short time
- 2. press the following keys **immediatly after each other** (we recommend to place your fingers directly on the keys before):

## **INFO, FACTORY**

3. Now your device is in service mode. Navigate to "Option" -> "Local Set" and set the right region (e.g. "EU\_GER" = Germany, "EU\_ITALY" = Italy)

We not recommend to try change the region code without the service remote. Because it will not work with every device.

- 1. Turn your device in stand-by mode
- 2. press the following keys after each other on your standard remote:

INFO, MENU, MUTE, POWER ON

3. see point 3 above
